

PHASE 1 · ACCESS & SETUP

- 1

Launch the app
Loads the dark theme, animations and session state. The candidate app runs with: streamlit run coach.py
- 2

Log in or create an account
Salted SHA-256 passwords. Candidates continue here; recruiters use the separate recruiter_dashboard.py app.
- 3

Auto connectivity check + AI setup
Online -> pick provider/model (Claude · GPT · Gemini) or use a shared key.
Offline -> automatic Demo Mode (built-in questions + instant scoring, no key needed).

PHASE 2 · CHOOSE THE INTERVIEW

- 4

Company / role selection dashboard
 - A "Hiring today" board that refreshes daily
 - Target a specific company (80+ / 15 sectors) or a general role
 - OR paste a recruiter's interview code
 - Optional resume upload -> AI match score & gapsA recruiter code skips ahead and applies that company's exact questions + lockdown rules.

PHASE 3 · CONFIGURE & GENERATE

- 5

Interview configuration
Choose experience level, language (8), focus (coding / behavioural / mix), number of questions (5-50) and minutes per question.
- AI

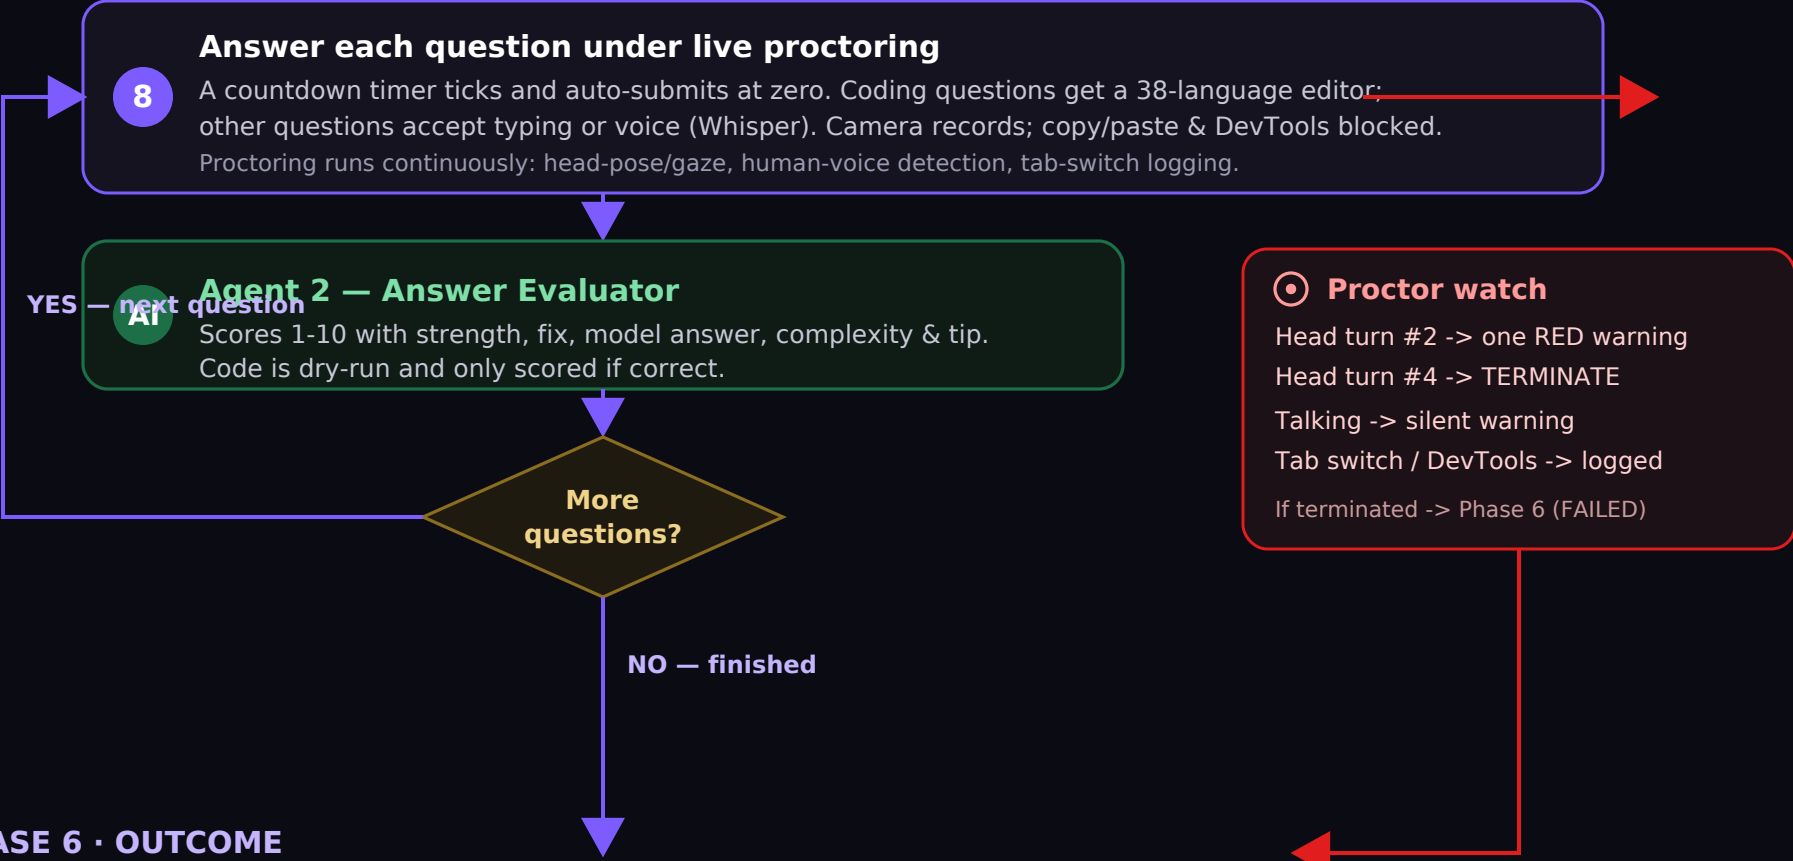

Agent 1 — Question Generator
The AI writes tagged questions [CODING]/[DESIGN]/[CONCEPT]/[BEHAVIORAL], tailored to the company & resume.

PHASE 4 · PROCTORING PRE-FLIGHT

- 7

System check (automatic)
Camera turns on, the face is detected and a photo is captured automatically.
The lockdown options the recruiter selected are activated and listed.
The green START button appears only after the camera + face are confirmed.

PHASE 5 · THE LIVE PROCTORED INTERVIEW (loops per question)

PHASE 6 · OUTCOME

- ✓ RESULTS (completed)**
 - Overall score, animated gauge & skill radar
 - Coding / Technical / Behavioural / Integrity cards
 - Professional PDF certificate + share links
 - Per-question breakdown + AI coaching summarySaved to history & the recruiter leaderboard.

⊘ TERMINATED (FAILED)
 - Reached when the proctor rule is broken
 - No score is awarded
 - FAILED PDF certificate + detailed PDF report
 - Failed attempt saved for the recruiterCandidate may retake in a quiet, lit room.
- Companion app — Recruiter Dashboard (recruiter_dashboard.py)
- Runs separately but shares the same data folder, so the two apps stay in sync:

 - Analytics — every candidate result, filters, CSV export, leaderboards
 - Create Interview — design a custom interview, choose 13 lockdown options, get a shareable code (used in Phase 2)

The certificate then carries the company's name as the issuer.
- Cross-cutting technology (active throughout)
- AI: Claude · GPT · Gemini (auto-fallback) with an offline demo bank for no-internet days
Lockdown: configurable copy/paste, right-click, DevTools, shortcuts, tab-switch, screenshot, selection blocks
Proctoring: MediaPipe FaceMesh head/eye tracking · Web-Audio human-voice detection · auto full-screen
Storage: local JSON (accounts, sessions, leaderboard, custom interviews) · PDF export via reportlab
Frontend: Streamlit + custom HTML/CSS/JS components. Honest note: lockdown is a strong deterrent, not tamper-proof.
- AI Interview Coach · candidate flow (coach.py) with the recruiter companion app · diagram for project submission
- 1 Access -> 2 Choose interview -> 3 Configure & generate -> 4 Pre-flight -> 5 Interview -> 6 Result
